

Release Notes for IDC Version 2015.0.36

(Emin Can Dogrul; DWR)

This version of IDC includes the following modifications and corrections:

1. **(01/26/2015)** An error in the initialization of time-series input data files that caused IDC to crash in certain cases was corrected.
2. **(03/12/2015)** In both Root Zone Component Versions 4.0 and 4.1, when printing out the final moisture contents, moisture from generic sources was mistakenly left out. This is corrected.
3. **(03/12/2015)** In both Root Zone Component Versions 4.0 and 4.1, it is now checked if deficit irrigation is simulated at each cell. If it is, an informative message is emitted to make sure user is aware of the situation.
4. **(04/03/2015)** A new data file, depth-to-groundwater time-series data file, is added so that users can list depth-to-groundwater at each finite element cell to compute root water uptake from groundwater.
