

Release Notes for IWFEM Version 2015.0.426

(Emin Can Dogrul; DWR)

This version of IWFEM includes the following modifications and corrections:

1. **(10/19/2015)** Tile drain hydrographs (if specified by the user) now require names assigned by the user.
2. **(10/19/2015)** Optional stream hydrographs are now required to be assigned a name by the user.
3. **(10/19/2015)** An error in defining the filename for the stream hydrograph output file is corrected.
4. **(10/19/2015)** When budget data for large number of locations (e.g. subregions, small watersheds, etc.) were stored in budget HDF5 files, an error was produced by the HDF5 library both during writing and reading of the data. This is corrected.
5. **(11/05/2015)** In certain cases, IWFEM was incorrectly producing file reading errors. This is corrected.
6. **(11/09/2015)** In Root Zone Component, when the soil moisture content exceeded the total porosity in native and riparian vegetation areas, the reduction of infiltration of precipitation was done incorrectly. This is corrected.
