

Release Notes for IWFM Version 3.02.65

(Emin Can Dogrul; DWR)

This version of IWFM includes the following modifications and corrections:

1. **(07/07/2011)** Parts of the source code were modified so that the same code set can be compiled under both Windows and Linux operating systems.
2. **(01/13/2012)** New source code is added to export procedures to a dynamic link library (DLL). This DLL is developed to be used by other tools such as the IWFM ArcGIS GUI and IWFM Tools Excel add-in.
3. **(03/12/2012)** An error in skipping timesteps and locations in the diversion details binary budget file was corrected.
4. **(07/09/2012)** Z-Budget was reading incorrect values when there was only one aquifer layer modeled. This is corrected.
5. **(07/13/2012)** In pumping specifications template file, description of option 4 for IOPT was missing. This was added.
6. **(11/02/2012)** When a stream reach flows into a lake, IDWN variable for that reach is negative. This case was not considered in an IF statement during the ranking of stream diversions which led to an infinite loop. This error was corrected.
