RE: South Delta Improvements Program

Dear Director Snow:

I am writing today on behalf of the Central Coast Water Authority, one of the twenty-nine State Water Contractors receiving water from the State Water Project, to express our organization's support for the Department of Water Resources' (DWR) South Delta Improvements Program (SDIP), one of several important projects designed to support California's diverse water needs. This October, DWR and the U.S. Bureau of Reclamation released a draft Environmental Impact Report/Statement (EIR/S) for SDIP, kicking off an important public review and comment process.

As you know, California is facing a critical water challenge. We must have a safe, reliable and high quality water supply if we are to keep up with our continuously increasing population and fast-growing trillion-dollar economy. We have limited water supplies in our arid State and we must use our water resources and infrastructure in the wisest and most efficient manner, otherwise we put our communities, farms, environment and businesses at great risk. Two-thirds of California receives its water from the San Francisco Bay/Sacramento-San Joaquin Delta. Given its critical importance, we need to find the best ways to manage the Delta's water and water delivery system.

In 2000, the State and federal governments initiated the historic CalFed Bay-Delta Program to manage the Bay-Delta's water resources and eco-system. A unique collaboration of interests supported the plan including environmental organizations, water agencies, business interests, farmers, and state and federal water and fish agencies. SDIP is the next step forward in this long-term planning effort for the Bay-Delta. SDIP is a responsible and balanced plan to better utilize and integrate our existing water management infrastructure in the Delta. Collectively, it will improve our State's water supply reliability, water quality and the overall health of the Bay-Delta ecosystem. The program will construct seasonal tidal gates to protect fish, and improve water circulation and quality in the Delta, dredge select Delta channels to improve water deliveries for local farmers, and allow State Water Project delivery rates to increase modestly – only when needed and environmentally safe to do so.

Currently, the State is constrained in its ability to use surplus water supplies. We have the infrastructure to move the water, but until SDIP is approved, the State's water managers cannot fully or responsibly use the existing system. SDIP calls for

255 Industrial Way

only a 3-5% increase in the average amount of water pumped from the Delta. More significantly, SDIP will provide the flexibility to shift the timing of water deliveries when surplus is available and when environmentally safe to do so. Additionally, SDIP will help protect important Delta environmental resources. Specifically, it will help protect fish species in the Delta channels. At the same time, by providing the State greater flexibility in how and when SDIP operates its system of pumps, fish are granted greater protections. Given all these points, SDIP is supported by a statewide, broad coalition of water, agriculture, business, planning organizations, and local government officials including the Association of California Water Agencies, State Water Contractors, California Chamber of Commerce, California Business Properties Association, and the Western Growers Association.

Water is the lifeblood of California – critical to our families, farms, and businesses. It is our responsibility to use this precious resource wisely through all possible best management practices, including water conservation, recycling and storage, to ensure California's water future. It is imperative that we have a more flexible water delivery system so that we can continue to accommodate growth in our population and economy while relying on existing water supplies.

Again, we strongly support SDIP and encourage all key stakeholders to help advance this critically needed project.

Sincerely,

William J. Brennan
Executive Director
